### Detailed Action

1. The drawing is objected to under 37 CFR 1.83(a) as failing to show and label a headed part (claim 5). At best a sketch of any proposed drawing change must be presented for approval. The introduction of new matter should be guarded against.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claims 14, 15 and 16 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

These claims are narrative in form since several elements are set forth in terms of operation rather than being structurally defined and related. The claims should include the essential elements of the invention and the elements should be correlated to define an operative device. For examples of additional problems note the following comments.

Regarding claim 14, this claim should positively recite that "said machine part" is a rake. It should also correlate "a actuator rod" with the actuator rod in claim 1. Note a

Art Unit: 3652

actuator should be an actuator and a should be inserted before feeding in the last line.

The feeding device should also be positively claimed.

Regarding claim 15, this claim is remiss with terms which lack antecedent basis and are not positively correlated to define an operative device. For example note "the plurality of packets" lacks antecedent basis and the phrase "as per determined distance" appears to be detached from the rest of the claim.

Regarding claim 16, the processing system should be positively correlated with the part processor in claim 1.

5. Claims 1-13 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Nagai et al.

6. Looock discloses moving a plurality parts in unison by using horizontal transfer device.

7. Any inquiry concerning this communication should be directed to D. Underwood at telephone number (703) 308-1113.
